ADDENDUM # 2

RE: Request for Proposal 40023-R23011 dated 20 March 2023

Questions, Answers and Clarifications

1. **Question:** Are you in particular with latitude and longitude directions which is eventually pointing towards Baton Rouge location. We are thinking of Shreveport location which is ideally fall in to 5 hours distance and safe from Hurricane impacts perspective. Can you please help us with what would be your preference for location?

Answer: Northern Louisiana is ideal. Shreveport would fall within NTCC's desired specifications as laid out in sections 2.1.E.a and b of the RFP.

2. **Question:** How much power is expected to draw for 22 to 23 racks?

Answer: NTCC does not have long-running historical usage of the equipment's draw, but expected power usage could be between 2.4kw and 5kw. The equipment generally includes 4 single-socket servers, 2 hard disk shelves, 3 network switches, and 2 firewalls/routers, but this is not necessarily the only equipment layout that NTCC may decide to have installed at any given time. The equipment loadout is subject to change as NTCC's needs change.

3. **Question:** Do you need private cage or dedicated cage?

Answer: Per section 2.1.E.k of the RFP, the Co-located rack space must be separately lockable from other customers in the datacenter. Whether you choose to use a rack with independently secured sections of the cabinet, private/dedicated rack, private/dedicated cage, or other method, could be accepted so long as it meets the requirements of that line.
